Life Simplified

FREESTANDING APPLIANCES

2018

QUALITY AND TRADITION

Gorenje has been producing high-quality home appliances for over 60 years. It is committed to the research and development and continuous technological improvement to its production processes. Drawing on Slovenian tradition and European values, Gorenje remains among the leading home appliance manufacturers in Europe. We are proud of every product that leaves our factories as we are aware that it was produced and tested to meet the stringent European environment protection standards.

WE MAKE IT SIMPLIFIED. YOU MAKE IT PERFECT.

Freestanding Cookers

Ready to introduce some delicious moments to your kitchen? With the **new Gorenje HomeMade cookers**, this becomes charmingly simple. Prepare your favourite food just like in a traditional wood-burning oven or impress your family with a range of tasty experiences. We designed our cookers with **smart** and **user-friendly solutions**, so you can rely on them and just add your final touch.

HomeMade shape

All the qualities of baking in wood-burning ovens

The characteristic rounded shape is one of the most beneficial features of Gorenje cookers. Inspired by traditional wood-burning ovens, it enables hot air to move around freely. Since the food is

heated evenly and from all sides, it is always perfectly done: crispy on the outside and juicy on the inside.

SuperSize

Ready for XXL recipes

Gorenje cookers offer enlarged baking surface and use of extra big trays. Innovative solutions enable optimised energy consumption and evenly cooked food, regardless of the quantity. Full oven width is efficiently used while superior technology makes sure the food is evenly done on all levels.

BigSpace

More space for greater cooking freedom

The increased capacity of the oven (up to 70 litres) allows preparing bigger quantities of food at the same time. The optimised airflow circulates inside the oven completely freely and with their BigSpace cavity Gorenje cookers can easily accommodate even a huge turkey.

MultiAir Technology

Perfect from all sides

MultiAir technology guarantees the optimal circulation of heat within the oven. Due to smartly positioned ventilation openings on the back wall and the unique rounded shape, air is spread evenly throughout the oven. The fan pushes hot air around the entire oven

volume, making the food perfectly baked on all sides. The dynamic air movement also allows simultaneous baking on multiple levels without smells and flavours mixing together.

MultiLevel Baking

Many dishes in one go

Combination of MultiAir technology and HomeMade shape helps reach the toughest objective: preparing **up to 4 trays** of dishes at once. The good news: the flavours and smells don't mix. Smart air distribution ensures that the food is evenly baked on every level.

AquaClean

Simple, casual cleaning

Due to special high-quality enamel, AquaClean function brings even more efficient and user-friendly way of cleaning the oven cavity. All it takes is to pour half a litre of water into a baking tray and turn AquaClean on after each baking. In just 30 minutes, the results are visible on the entire surface and the baking trays. Stains and grease are softened and can be wiped away easily with a soft cloth.

 **OpenView**
Excellent overview

Advanced and even double lighting featured in some models of cookers enable clear view of the large oven cavity. Combined with special design of the glass door, this brings excellent overview of the baking process.

 **XXL Storage drawer**
Everything neatly within reach

A specially large and deep drawer for storing larger cookware or cooking utensils. Trays, baking pans, tableware - have everything you need at hand with this convenient and spacious storage solution.

 **GentleClose**
A soft touch is enough

Only a soft touch is needed to close the cooker door smoothly, without any noise.

DirectTouch

Perfect results at your fingertips

Simple control of baking and cooking process by touching a screen. Large and intelligible symbols take the remarkable technology to another level with clarity and simplicity of use.

TouchFree coating

Shiny and fingerprint-free finish

All stainless steel surfaces are coated with a special TouchFree film that prevents fingerprints markings, leaving the surface always shiny and making cleaning much easier.

Extra deep baking tray

Deep enough for all appetites

Higher sides of this extra deep baking tray prevent the fat from splattering and burning onto the oven cavity walls. It is perfect for making meals such as lasagne and roasted meat.

MeatProbe

Perfectly roasted, every time

With the meat probe it is easy to achieve perfect and precise baking results. By controlling the temperature inside the meat, the MeatProbe manages the entire process and even activates the alarm when the time is right and the dish is perfectly done.

UltraCoolDoor

Made to be touched – anytime, all the time

Special innovative construction and special glazing on the door isolates the oven, so the heat is kept inside, optimising energy consumption by stopping heat escaping from the oven cavity. This means that the cooker is even safer for the user, children and pets, and it also reduces ambient temperature changes arising from the cooking process.

DC+ System

Effective heat management

The DynamiCooling system efficiently cools the cooker exterior to prevent any damage caused by high temperature. In cookers with the DC+ system, the heat sensors regulate the cooling of the oven exterior walls until they reach a safe temperature of 60 °C.

SilverMatte Ultra resistant, ultra smooth coating

Enamel quality and type are exceptionally important for the cooker and its operation. SilverMatte is a highly resistant and strong material that can stand extreme heats. Free from micro pores, it coats oven cavity surfaces and baking trays, making them resistant to the highest temperatures. The coating of the interior supports heat reflection and provides additional insulation. Therefore, the oven interior always stays sterile and safe.

ChildLock The kitchen as a safe environment

ChildLock option is excellent for those who have children at home. This setting will prevent them from resetting any parameters or changing settings on display.

Special Programmes

Stay Warm Staying perfect for the latecomers

The StayWarm function keeps food at a constant temperature of 70°C until the time is right to serve the meal. The food retains its original flavour and temperature until it is served.

auto Defrost

In order to keep the food in perfect condition even after defrosting, it is very important to thaw it quickly and that the heat penetrates the core evenly and simultaneously. Safe defrosting is made possible by the defrost program. Use of a drip tray will also prevent undesired drops or spills of liquid. Place the frozen food on the oven rack in the middle of the oven. The drip tray placed into the lower guide will catch the dripping liquid.

Plate Warming Serve professional dishes in the comfort of your home

Warmed plates prevent the loss of flavour and ensure that food tastes every bit as good as it should: from soups to pastas and steamed vegetables. WarmPlate will keep your crockery at precisely the right temperature at 60°C. Enjoy professional service in the privacy of your home.

PERFECT TASTE WITH SPARK OF CREATIVITY

Gas Cooktop

Cooking like a chef can be simple. All it takes is a creative spark as Gorenje cooker with gas cooktop will take care of everything else. With its big surface, powerful burners and advanced

features, it offers support for your wildest cooking endeavours. Ignite your inspiration and surprise your loved ones with perfect home-made dishes.

*Cooktop covers as shown in the picture above are only available in select markets.

Big surface

Plenty of space for every pan or pot

Enlarged cooking surface (up to 20%) and longer distances between burners offer plenty of space for all sizes of pans and pots. Sleek and flat design allows easy sliding and using very

big pots without disturbance, with perfect stability for all your cooking adventures.

ChefBurners

More powerful and efficient cooking

New high-efficiency ChefBurners provide more efficient gas consumption and enable faster and eco-friendlier cooking. Different sizes of burners give you full flexibility, while their user-friendly positioning enables easy and safe cooking.

Cast iron ProGrids

Strong, stable and durable support

Massive and elegant cast iron ProGrids are extremely stable and resistant even to the highest temperatures. They bring superior stability, durability and user-friendly design to your kitchen.

FAST AND EFFICIENT COOKING, SIMPLE CLEANING

Induction cooktop

Induction hobs heat up twice as fast as HiLight hobs, which makes them comparatively more economical and safe. An induction hob only heats the bottom of the pan while the remaining hob surface stays cool and always safe to touch. Temperature is adjusted instantly, by a simple touch, limiting the danger of boiling over. With such a hob melted chocolate, sophisticated sauces and other temperature-sensitive masterpieces become just a simple task.

PowerBoost Cooking on fast-forward

PowerBoost function provides extreme heat intensity to the pot and significantly cuts cooking time. Boiling 2l of water now only takes about 5 minutes, which is extremely time-efficient. So with PowerBoost you save time, energy and money.

BridgeZone A simple plan for super-sized pots

The induction hob with two connecting zones simplifies cooking in large-sized pots. Two separate cooking zones are bridged to form one with just a simple touch. Perfect for preparing bigger pieces of food and sides simultaneously.

THE COOL SIDE OF YOU

Vintage design, with a long list of colours to choose from, makes this refrigerator one of the highlights of your home. As a design item you can easily place it anywhere you like. Perhaps in your romantic kitchen, in your chic urban nest, even your funky loft. Each Retro refrigerator is striking, boasts optimal storage configurations, and all the features one would expect from a high-end appliance. Whatever the colour, these modern icons are an instant hit wherever they pop up.

IonAir with MultiFlow 360°

Ideal microclimate on every shelf

Advanced technology in the refrigerators emulates the natural process of ionization to keep the food fresh longer. Negatively charged ions generated by the appliance continuously refresh the air to mimic a natural microclimate, thus creating the ideal environment for fresh food. The MultiFlow 360° ventilation system evenly distributes the ionized air through 14 ventilation slots to maintain constant temperature on every shelf.

IonAir with DynamiCooling

Even temperature distribution in the refrigerator compartment

Advanced fan system with dynamic cooling evenly distributes the ionized air and equalizes the temperature throughout the entire refrigerator. Air enriched with extra negative ions mimics the natural microclimate that keeps the food fresh for longer. Moreover, any type of food can be placed on any shelf in the fridge as there are no temperature differences.

NoFrost Plus

No more tedious defrosting

One of the best cooling systems in the market, installed in the freezer compartment, prevents the accumulation of ice and frost to keep the power consumption low, while in the refrigerator compartment, it maintains an ideal microclimate for fresh food. Circulation of ionized air prevents the food from drying out and retains its vitamins and minerals.

AdaptTech

A refrigerator that recognizes your habits

This smart system was devised to maintain the optimum temperature in the refrigerator regardless of how frequently you open the door. When the door is opened, the temperature suddenly rises and the food is exposed to a thermal shock which in turn causes it to perish sooner. The refrigerator continuously monitors and analyzes the way you use it. Thus, it can predict when you will open the fridge door and just before you do, it decreases the temperature by 1 or 2 °C to make sure constant temperature is maintained and that the food stays fresh and full of nutrients.

LedLight

Well-arranged and efficient fridge

Power saving LED lighting fixtures in a form of strip are highly energy-efficient, have a notably longer useful life and consume less power.

PullOut shelves

Easy access to food

Sliding shelves for quick and easy access to food, which hold up to 22 kg of food.

SimpleSlide shelves

For both tall and short bottles

An especially practical mechanism which allows movement of shelves up and down.

FreshZone drawer

Fresh as if straight from nature

The drawer with the lowest temperature in the refrigerator is ideal for storing meat, fish, fruit, and vegetables. It will preserve the food's freshness, aroma, colour, and flavour for much longer.

ZeroZone drawer

Fresh as if straight from the sea

The drawer with temperature around 0 °C is ideal for storing fresh or marinated meat, fish and seafood. It extends the freshness of delicate food and keeps its natural juiciness and nutrients.

XtremeFreeze drawer

Freezing in a flash

Rapid freezing at extremely low temperatures. The shock-approach preserves all nutrients and the flavour of the food.

MultiBox

Multi-functional, practical box

The multi-purpose bin with a cover in the refrigerator door can be used for storing cheese, onions, and other food with a pungent smell. It keeps the food fresh and protects it from drying, while the silicone cover can be used as an egg or ice tray.

FastFreeze

Rapid freezing

Function inside the freezer for fast freezing of food, perfect for restocking.

CrispZone drawer featuring HumidityControl

Just like garden-fresh

CrispZone is one of the largest fruit and vegetables bins in the market. Low temperature and the option to adjust the humidity extend the freshness of your produce.

FrostLess

Less ice, more energy saving

Improved insulation effectively reduces the accumulation of frost on the food and ice in the appliance interior. This means less tedious defrosting and a lower electricity bill.

Top energy efficiency

All Gorenje refrigerators are highly energy-efficient. Excellent thermal insulation and door sealing and electronic or mechanical control efficiently reduce power consumption. Gorenje A+++ refrigerators verified by the Energy Saving Trust cost less than £2 to run every month, or just £3 for A++.

(Based on ORB153, RF60309, ORK193, ONRK193. Figures are based on the EU Energy Label energy consumption. Average electricity price of 13.86p/kWh. Correct as of January 2016).

Inverter Compressor

Steady, silent, and durable

InverterCompressor are more silent, have a longer useful life and they are more economical compared to those with a conventional compressor. Whenever the temperature in the fridge interior rises as a result of door opening, the inverter compressor delivers rapid and effective cooling to prevent the food from spoiling.

EcoMode

Energy savings

In case of prolonged absence, the fridge can be set to operate in power-saving mode as the door is closed all the time.

SuperCool

Rapid cooling after weekly shopping

The intensive cooling function drops the refrigerator temperature by nearly a half of its usual. Ideal for rapid cooling of food after major shopping trips.

Fan

Fan assisted cooling

A fan propels the air to make sure the temperature is even throughout the refrigerator. This improves cooling and prevents accumulation of condensate, thus maintaining optimum environment for lasting freshness of all types of food.

GUARDIANS OF VITAMINS

Cooling Appliances

Gorenje refrigerators, freezers and fridge freezers are the hub of every kitchen. They are tasked with a simple mission – make sure your favourite food is always available. But Gorenje cooling appliances can do much more. They feature smart technologies to mimic the conditions similar to those found in nature, which keeps the food fresh, tasty, and full of vital nutrients for longer. On the inside, they are thoughtfully organized to allow the user optimum view and plenty of space for storage of even larger amounts. On the outside, their superior design introduces a welcome visual accent to any home. Last but not least, they are notoriously charming with their silent and economical operation, and convincing durability.

IonAir with the MultiFlow 360° function

Ideal microclimate on every shelf

Advanced technology in the refrigerators emulates the natural process of ionization to keep the food fresh longer. Negatively charged ions generated by the appliance continuously refresh the air to mimic a natural microclimate, thus creating the ideal environment for fresh food. The MultiFlow 360° ventilation system evenly distributes the ionized air through 14 ventilation slots to maintain constant temperature on every shelf.

Natural microclimate inside refrigerator

Bad food storage

AdaptTech

A refrigerator that recognizes your habits

This smart system was devised to maintain the optimum temperature in the refrigerator regardless of how frequently you open the door. When the door is opened, the temperature suddenly rises and the food is exposed to a thermal shock which in turn causes it to perish sooner. The refrigerator

continuously monitors and analyzes the way you use it. Thus, it can predict when you will open the fridge door and just before you do, it decreases the temperature by 1 or 2 °C to make sure constant temperature is maintained and that the food stays fresh and full of nutrients.

Temperature [°C]

— Line of temperature oscillations in a regular refrigerator

— Line of temperature oscillations in refrigerator with AdaptTech technology

NoFrost Plus

No more tedious defrosting

One of the best cooling systems in the market, installed in the freezer compartment, prevents the accumulation of ice and frost to keep the power consumption low, while in the refrigerator compartment, it maintains an ideal microclimate for fresh food. Circulation of ionized air prevents the food from drying out and retains its vitamins and minerals.

The big party can start

ConvertActive fridge freezer The big party can start

The fridge freezer only takes a simple press of a button to turn the freezer compartment into a refrigerator compartment, affording more space for storage of snacks or beverages.

NRC 6192 TXUK

CrispActive drawer with the VitaLight

The fruit and vegetables bin with the special VitaLight extends the freshness of the food. A spectrum of orange light slows down the natural process of ripening in the fruits and vegetables to retain vitamins and minerals.

FreshActive drawer

This drawer is ideal for storing meat, fish, and seafood. The temperature is a few degrees lower than in the remaining part of the refrigerator compartment, which considerably extends its freshness.

CrispZone drawer featuring HumidityControl Just like garden-fresh

CrispZone is one of the largest fruit and vegetable bins in the market. Low temperature and the option to adjust the humidity extend the freshness of your produce.

ZeroZone drawer Fresh as if straight from the sea

Keeping the temperature around 0 °C, this drawer is ideal for storing fresh or marinated meat, fish and seafood. It extends the freshness of delicate food and keeps its natural juiciness and nutrients.

XtremeFreeze drawer Freezing in a flash

When this function is activated, the food placed in a special drawer in the freezer compartment will be frozen in half the usual time. Rapid freezing at extremely low temperatures below -30 °C leads to formation of microcrystals that, unlike in case of slow freezing, do not damage the cellular structure of the food. The shock-approach to freezing thus preserves all nutrients and the flavour of the food. After approximately 1 day, the function is automatically switched off and the temperature in the drawer returns to the initial setting.

XXL SpaceBox Enough space to store a turkey

This freezer compartment drawer is the largest in the appliance and it is ideal for storing large items like a turkey, several pizzas, or even cakes.

SlotIn

Owing to the functionality of opening the refrigerator door at a right angle, all shelves and bins can be fully pulled out. This solution is ideal for refrigerators placed against a side wall, or adjacent to a countertop or another appliance.

SuperCool

The intensive cooling function drops the refrigerator temperature to 3 °C, which is lower than usual by nearly a half. Combined with large refrigerator compartment volume, this temperature is ideal for rapid cooling of food after major shopping trips. After six hours, the function is switched off automatically and the refrigerator compartment temperature returns to the initial setting.

PullOut shelves

Shelves on extendible guides allow quick and easy access to food at the back of the fridge. The tempered glass shelves are highly durable and will carry up to 22 kilograms of food.

FrostLess

Improved insulation effectively reduces the accumulation of frost on the food and ice in the appliance interior. This means less tedious defrosting and a lower electricity bill.

FastFreeze

The FastFreeze function freezes the food at -24 °C to preserve most of the minerals in the food. After approximately 2 days, the function is switched off automatically and the freezer compartment temperature returns to the initial setting.

MultiBox

The multi-purpose bin with a cover in the refrigerator door can be used for storing cheese, onions, and other food with a pungent smell. It keeps the food fresh and protects it from drying, while the silicone cover can be used as an egg or ice tray.

SimpleSlide shelves

Height-adjustable shelves in the refrigerator door can be easily moved up or down to accommodate up to 5 kilograms of food of different shapes or sizes.

IonAir with DynamiCooling

Advanced fan system with dynamic cooling evenly distributes the ionized air and equalizes the temperature throughout the entire refrigerator. Air enriched with extra negative ions mimics the natural microclimate that keeps the food fresh for longer. Moreover, the any type of food can be placed on any shelf in the fridge as there are not temperature differences.

LedLight

LED lighting in refrigerators provides excellent and highly efficient illumination. Its useful life is thirty times as long as that of conventional light bulbs, and it saves up to ten times as much power.

EcoMode

In case of prolonged absence, the fridge can be set to operate in power-saving mode as the door is closed all the time.

Top energy efficiency

All Gorenje refrigerators are highly energy-efficient. Excellent thermal insulation and door sealing and electronic or mechanical control efficiently reduce power consumption. Gorenje A++ refrigerators verified by the Energy Saving Trust cost less than £3 to run every month.

(Based on NRC6192TXUK and NRK6192M. Figures are based on the EU Energy Label energy consumption. Average electricity price of 13.86p/kWh. Correct as of January 2016).

A WASHER WITH A GENTLE HEART

Washing machines

Gorenje washing machines are a reliable partner in the daily care of your laundry. It understands the limited amount of time and patience for every day mundane tasks. Therefore, it offers programmes that are a perfect fit of different lifestyles and offer every user the functions they desire. It can wash quickly; it can wash environmentally friendly. It can be silent; they can be meticulously thorough. Regardless of the mode you choose, your laundry will always be washed gently and with care. The fabric will remain fresh and flexible, and the colours will retain the right hue.

SensoCare

Perfection in washing

SensoCare technology makes sure every type of fabric is washed in the best possible way. It always delivers the optimum combination of temperature and amount of water, time, and spin speed. If, however, your clothes need a very special care, the cotton and synthetic fibre programmes can be tweaked with

extra modes and functions. NormalCare selects the optimum combination of all four parameters for each load of laundry; TimeCare reduces the washing time; AllergyCare uses more water and extra rinse cycles; and EcoCare is the most energy-efficient washing mode.

TimeCare

40% quicker wash

Intensive and quicker wash for less soiled laundry and smaller loads.

EcoCare

60% energy savings

The wash is somewhat longer, but it uses less water and power.

AllergyCare

Efficient rinse

Additional level of water and thorough rinse are more efficient in removing the traces of detergent and thereby the allergens that could cause an unpleasant sensation on the skin.

SpaDrum

Total laundry care

The SensoCare washing machine drum is made from the best quality stainless steel with exceptionally smooth surface. Therefore, the laundry is thoroughly washed, rinsed, and spun without any damage.

Perforation

Water gently spraying into the drum

Small holes with a diameter of no more than 3 millimetres treat your laundry especially gently. In addition to effective washing, spinning, and rinsing, they also prevent any damage to your laundry. Moreover, the size, shape and pattern of drum perforation reduce the consumption of power and water.

3D ribs

Gentle waving of the laundry

First, the wavy ribs gently push the laundry towards the rear end of the drum; then, they lift it toward to top. This improves the distribution of laundry within the drum, and delicately massages the fabric. Additional water is sprayed from the openings in the rib surface for better soaking.

Tilted 4D door

Always on the right path

Improved patented glass washing machine door is designed for active 4D motion of the laundry towards the central part of the drum where it receives the best treatment and maximum protection. Laundry is better washed and less wrinkled, appliance quieter with extended lifetime.

UltraWhite

White that will never turn grey

Synthetic fibres, silk, and nylon are easily damaged in machine washing. Therefore, a special programme has been developed to wash at lower temperatures and preserve the quality of your delicates. Gentle tumbling with a larger amount of water delivers perfect whiteness at no more than 30 °C. Use of specialized detergents is recommended for extra freshness.

PerfectBlack

There is only one black

A special washing programme for all types of black fabric is highly efficient with gentle tumbling at no more than 30 °C. This does away with the need for intensive tumbling and use of aggressive detergents that make the laundry fade to grey. Specialized detergents are recommended for delicate black laundry.

Anti-allergy programmes

For extra protection of delicate skin of babies and adults

Anti-allergy Cotton, Baby, Anti-Mites programmes use higher temperature, more water, and extra rinsing. As a result, the detergent is dissolved more efficiently and the laundry is very thoroughly rinsed. Washing powder, allergens, and mites that could cause an unpleasant sensation on sensitive or particularly delicate baby skin will be eliminated from your clothing, bedding, and larger clothing items.

NightWash

The laundry can also be easily and silently washed at night. The drum spins more slowly and gently, but this is compensated with a somewhat longer wash that leaves the laundry perfectly clean.

BioWash

A perfect solution for all who use organic washing agents such as laundry balls or soap nuts. The combination of a larger amount of water, temperatures of up to 90 °C, and fast tumbling allows optimum use of the organic washing agents and clean laundry.

MyFavourite

Your washing machine can simply memorize your favourite or most frequently used programmes to make them always available for instant selection. It can also memorize all extra settings such as adjusted washing temperature, spinning speed, or a pre-wash.

SportWash

Gentle tumbling of the laundry in a large amount of water at 30 to 40 °C is ideal for washing synthetic fibres. Thus, your sportswear will always be fresh and pleasantly smelling, ready for new endeavours.

HandWash + Wool

This programme takes care of woollen, silk, or lace garments as if they were washed by a pair of caring hands. The shape and quality will be maintained, and the stains and dirt will be removed at temperatures as low as 30 to 40 °C.

QuickWash 17'

Less soiled laundry can be easily refreshed in 17 minutes at a temperature of 30 °C. Thus, your next outfit will always be ready.

InverterPowerDrive

Remarkable power, high efficiency

The powerful motor is brushless, which eliminates and mechanical tension, friction, or wear. The results are better, power savings are higher, and the washing process is notably quieter. Moreover, appliance useful life is longer, too.

TotalWeightControl

Superior washing results regardless of the amount of laundry

The sensor adjusts all washing parameters to the amount of laundry in the drum. This leads to optimum use of water and power, shorter wash, and considerably quieter operation. A full basket of laundry, no matter how large, will be clean and pleasantly smelling.

StainExpert

Expert in stains

Effective removal of stains no longer requires high temperature or additional treatment of clothing before the wash. The perfect combination of temperature, time, and water will automatically remove four types of stubborn stains: fruit (oranges, tomato sauce); organic stains (fat, butter, eggs, grass); wine (dark fruit juices, ink); and coffee (tea, yoghurt, pasta, make-up). The StainExpert function is available in the Superior washing machines.

DuraHeat

Safe and durable

The redesigned and improved heater includes an overheating protection system. This extends its useful life and makes washing machine operation safer.

Sensor IQ

Smart wash

The sensor system controls washing process and makes sure it is perfect. Smart technology adjusts the amount of water and washing time to the selected program, and type and weight of the laundry. The results is excellently washed laundry and lower use of power, water, and time.

Friendly design

Gorenje washing machines are designed to be functional and ergonomic, which makes their use inspiringly simple. The control panel is tilted by 20° and the door opening has a large 34 cm diameter for easier filling and emptying of the washing machine. Filters and detergent dispenser are also easy to clean.

SteriTub

This program makes sure the washing machine interior stays perfectly clean and sterile, allowing a pleasant smell of the laundry. Washing with washing powder at lower temperatures may lead to ideal conditions for development of bacteria which in turn could cause a foul smell of your laundry. The SteriTub works with the drum empty and eliminates and bacteria from the machine interior.

A+++ -20%

All washing machines are highly energy-efficient. Those ranking in the A+++ -20% energy class use 50% less power than the A-class appliances.

ChildLock

During the wash, the door stays locked, preventing even the most inquisitive child from opening it. For added protection, the control panel can be locked by pressing a special combination of keys, making it impossible to inadvertently change the settings.

AquaStop

The safety system automatically shuts off the water supply to the hose and the machine in case of a leak to prevent flooding. The pump automatically pumps out the remaining water from the drum into the discharge hose. Thus, the washing machine can be left to operate unsupervised, without any fear of flooding. High-end models feature a special sensor installed at the bottom of the washing machine. In case of a leak, the sensor will immediately cut off the supply of water into the appliance.

Zn Zinc-coated housing

Gorenje washing machines are coated with an environmentally friendly protective layer that fends off rust and extends the useful life of the appliance.

SuperSilent

Quality drive and insulation allows the SensoCare washing machines to operate quietly. Even during the hardest spin, it will not be louder than a normal conversation. Top models excel with extra silent operation.

ALWAYS NICELY DRY

Tumble dryers

A Gorenje laundry dryer can easily become your best friend, especially when you are in a hurry. Its drum delivers the power of negative ions that make the laundry extra soft, pleasantly smelling, and free of allergens. It also dries the laundry in a way that makes ironing very easy and often not required at all. In a Gorenje dryer, the fabric keeps its shape, flexibility, and stiffness. Dryer interior is large enough for large amounts of laundry. Models fitted with a heat pump, are also excitingly economical in terms of power consumption.

SensoCare

Sensationally soft laundry

The SensoCare technology makes sure that each type of fabric is dried in the best possible way. The combination of temperature, steam, drying time, and drum rotation afford drying

conditions tailored to your laundry. While NormalCare delivers improved drying programs for all types of laundry, GentleCare will provide a friendlier care for your delicates.

IonTech

Fighting the allergies with ions

In SensoCare dryers, air full of negatively charged ions dries the laundry in a way that considerably reduces creasing of your clothes. The ionizer emits negative ions to effectively eliminate most allergens, residues of smoke and pollen, and the electrostatic charge accumulated during the drying process. As a result, the clothes have a better smell and they are easier to iron.

SteamTech

Fewer creases, less ironing

Additional steam treatment at the end of the selected program will make sure your clothes are much smoother. The drum is filled with steam that penetrates every fibre for softer laundry that hardly requires any ironing.

GentleCare

Gentle drying of delicate fabrics

Specialized care of the most delicate fabrics operates at a low temperature of 40 °C. A longer drying cycle is entirely safe and reliable as it protects your clothes from any deforming or damage.

HeatPump with TwinAir Revolutionary drying efficiency

All heat pump dryers boast high energy efficiency. High end models rank in the A+++ energy class, saving 63% of energy compared to those in the A energy class. Gorenje A+++ class dryer with a capacity of 9 kg is unique in the market. Optimized heat pump in one of the largest drums in the world, with a

capacity of 120 litres, can easily deal with major amounts of laundry. This is also made possible by the broader air channels. It also dries more gently than conventional drying systems. The temperature in the dryer is at the ideal 50 °C to prevent from overdrying.

TwinAir Evenly dried for simple ironing

Soft, evenly dried, less creased laundry that is easy to iron, straight from the dryer. This is made possible by the bi-directional air blowing system which adjusts the air blowing direction to the direction of drum rotation using a special flap on the fan.

Sensor IQ

Sensor technology for safe operation

Smart sensor technology automatically controls the drying process according to the selected program, type of laundry, and desired dryness of laundry. Efficient sensor communication prevents any errors

and maintains the best possible laundry drying environment. The sensors also monitor all other parameters to reduce power consumption.

FiltrationSupreme

Gorenje has the most efficient filtering system in the world, providing 40% more efficient air filtering than conventional systems. It includes a special 3D filter installed before the condenser unit, a filter on the dryer door, and a filter in the drum. These filters catch even the tiniest bits of dust and lint from the clothes. After the drying cycle, the latter two filters are simply wiped.

User-friendly condensate tank

The dryers condense all the moisture and drain it into a special tank. This does away with any worries regarding air evacuation. The light on the tank signals when the tank is full. The tank can be easily removed and emptied, and the water can be used elsewhere in your household.

AutoDrain

Condensation dryer with the AutoDrain drain hose can be connected to your drain system to do away with the need for manual emptying of the condensate tank.

Friendly design

Gorenje dryers have a clearly laid out control panel that is slightly tilted to allow a clearer view. They are designed for simple and pleasant use, featuring one of the largest door openings, simple opening system, and easily accessible filters and condensate tank.

Top energy efficiency

A+++ is one of the best energy ratings you can get for a tumble dryer. Upgrading to a A+++ tumble dryer could save you £28 every year when compared to a C-rated model of the same size, that's enough money saved to pay for your daily newspaper for 40 days!

(This is for the Gorenje D98F66EUK. Figures based on the EU Energy Label energy consumption. This assumes 160 loads per year. Average electricity price of 13.86p/kWh. Lifetime assumed to be 13 years - source: DEFRA/DECC Powering the Nation 2. Assumed retail cost of £659. Correct as of January 2016).

FULLY QUALIFIED TO DO YOUR JOB

Smartflex dishwashers from Gorenje

The new SmartFlex dishwashers are inspired by modern lifestyle. Because our everyday life can be quite dynamic we created a generation of dishwasher that takes the load of your shoulders with the help of many advanced features.

The interior is designed in such a way that every dish and piece of cutlery has its place, no matter the shape or size. The baskets are equipped with highlighted movable elements and a customizable basket layout for easy loading, while the cutlery can be perfectly organized on a special tray where it can thoroughly dry out after washing. Furthermore, the SmartFlex dishwashers offer you a variety of helpful functions: a wide range of fast washing options that are among the best in the market and can take care of any load in no time, automatic opening of the door for releasing steam and letting the dishes dry out and the dissolving of bad odors through the natural process of ionization.

12 place settings

As flexible as your time will be

The SmartFlex dishwashers offer enough space for all your needs. Two baskets enable washing up to 12 place settings at a time. The fully flexible interior allows for different loading options, the use is simple and the washing effects are perfect.

Total AquaStop

Do not worry about water spillage

With the AquaStop safety feature, the dishwasher can be safely left to operate at night as well as in your absence. In case of a leakage or flooding, AquaStop automatically cuts off the water supply

while the pump siphons the residual water out of the dishwasher basin. AquaStop remains fully functional over the lifespan of the appliance.

FREE 5- or 2- YEAR PARTS AND LABOUR GUARANTEE

Once you make your purchase you will need to register your appliance either online or over the phone, to register your Gorenje appliance online please visit our website www.gorenje.co.uk and go to “registration” OR to register over the phone please call **020 8247 3980**

Gorenje offer a free 5 or 2 year parts and labour guarantee. This guarantee shows our confidence in our technology and excellent product quality.

INVERTER POWERDRIVE MOTOR

Gorenje SensoCare washing machines are built to last. With the innovative inverter PowerDrive technology you will get an extra 10-year warranty on the motor.

AFTER SALES SUPPORT

Once you have bought a Gorenje appliance you can relax knowing that in unlikely event of a fault occurring, you can rely on us to look after your appliance. If you are experiencing problems and require customer support please contact our Service Hotline on:

0845 050 8555
(Republic of Ireland: 01 8835622)

Please have all your appliance details and date of purchase ready in order for your call to be dealt with efficiently.

Service Hotline opening times:

- Monday - Friday 8am - 6pm
- Saturday 9am - 4pm
- Sunday closed
